***Election/Restrictions***

Claims 22 – 30, 32-34 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 17 June 2004.

***Double Patenting***

Claim 31 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 15 of U.S. Patent No. 6,613,203 B1 (the '203 patent). Although the conflicting claims are not identical, they are not patentably distinct from each other because both instant claim 31 and claim 14 of the '203 patent essentially describe a membrane electrode assembly formed of expanded polytetrafluoroethylene (PTFE) with a structure including nodes aligned in parallel and interconnected with fibrils, such that the nodes have an aspect ratio of 25:1 or greater. In both the prior art and the instant invention, the nodes are filled with a material permeable to ions. Although the '203 patent claim 14 and instant claim 31 do not use identical language, one of ordinary skill in the art would understand the "expanded PTFE" recited in the '203 patent is the "carrier material for the electrolyte" recited in instant claim 31, and "electrolytes" and "perfluorinated surface active substances" recited in instant claim 31 encompass the "ion exchange material" required by claim 1 of the '203 patent.
